Product Concept Statement

ParkMate is a smart parking assistant designed for university students, faculty and visitors who struggle to find available parking on campus. This is one of the biggest struggles for the modern college student and staff. Users can open the app before arriving and view nearby parking lots and check estimated availability. Additionally,they can receive directions to the best option. The system solves the frustration of driving around crowded parking areas, wasting time and arriving late to class or meetings.

The most distinguishing features are real time parking availability, personalized lot recommendations, walking time estimates and alerts when the preferred lots become full. The design vision of this product is to make campus parking simple, predictable and efficient. The emotional impact goal is to reduce anxiety and frustration by helping users feel prepared and confident that they can find parking quickly and reach their destination on time.
